THIS IS WHERE I FEEL AT HOME!

Constant innovation for your comfort at home.

We want you to feel even better at home and for this reason we invest in continuous research and development. One outcome of these endeavours is Elesgo® technology, with which HDM sets new standards in decorative surface coatings. This unique production technique improves not only the visual effect of the surfaces but it also increases the resistance to wear and tear.

For us ecology is more than a fashionable word.

HDM uses natural raw materials and feels it has a responsibility to nature. We have our own forestry personnel who apply continuous forestry growth procedures to ensure the conservation of nature. The waste products, that are generated during the production process, is used to generate new energy. Waste materials, that can not be used internally, are collected and recycled. The contamination of the atmosphere is also reduced to a minimum by the use of modern filtering methods.

Wall and ceiling concepts

The everlasting, beautiful decoration for walls and ceilings with attractive décors, in a large variety, of high quality and for every taste.

The core material used complies, consistently and without exception, to the Formaldehyde regulations of the emission class E1. Moreover, the MDF (Medium Density Fibre) core material used by HDM has such a low Formaldehyde content that all HDM's MDF-panelling are certified to carry the German „blue Engel" stamp, which represents an environmentally friendly product.

Furthermore, HDM panels, with a high-quality forest wood MDF base, are also suitable for application in rooms where there is high humidity, (such as bathrooms).

The HDM-panelling program also offers mouldings with the same decors, a broad lighting system assortment and professional attachment systems.

Many options to make your home ideas become reality

The large selection of colours and the simple method of installation are not the only properties that make this new generation of panelling a very special product, moreover it is the very special quality of the surface. The Elesgo surface is robust, washable, and antistatic. Durability, hygiene, and style are characteristics from PanO'Flair. A characteristic of the material is that it is warm to the touch; this creates and induces a sense of well being of the highest level.

Highest quality in every perspective

This panelling is in the true sense of the word unique in its class. It is unique due to the world wide patented ELESGO® surface. It is also put in a class of fine art, as here natural stones have been reproduced exhibiting their very nature. Taking for example the Panelling in the décor juparana, the home of this stone is Sri Lanka and is very popular with architects and designers world wide for the surfacing of walls, floors, and worktops. We also give you PanO´flair as a high-quality design for your rooms. You will realise that the use of PanO'flair is by far not as costly as using the real natural stone. The result will convince you.

Panelling with style

With everlasting elegance and variety of décors that create an impressive spectrum of possibilities for walls and ceilings. Swing line panelling with tongue and groove is particularly durable, washable and easy to care. This quality panelling simply creates elegance in each room.

Swing Line panelling is available with a V20 (chipboard) or MDF core material. The MDF core material is controlled, by an independent organisation certifying E1 quality, and carries the ecologically friendly German „blue Engel" stamp. MDF panels are also excellent for application in humid rooms, such as kitchens and bathrooms.

Renovation without much turmoil

This panelling is perfectly suited for installation directly onto existing panelling as well as for assembling on substructures. The panelling is not installed using Clamps, but simply and quickly by using a nail gun.

Profile: Gapless

Core material: MDF

Available dimensions in mm:
Length x Width x Thickness (content)
2600 x 198 x 6(9 Paneele = 4,63 m²)

A special strong extended groove for the use of nails or staples. Up to 50 % of installation time is saved, when compared to installing standard panelling, as the panelling is installed directly onto the framework.

The panels can be laid directly onto a pre-laid panel ceiling.
